

# BIO-DOX

## BACTERICIDAL HAND SOAP

### *Effective*

Bio-Dox is a high active bactericidal hand soap and skin cleanser, manufactured from high quality surfactants and biocides.

A highly efficient bactericidal cleanser, Bio-Dox boasts impressive strength, as it contains a proven European Standard biocide called Benzalkonium Chloride. This means that Bio-Dox will kill bacteria effectively, whilst remaining safe to be used as a cosmetic-grade hand soap.

### *Food Safe*

With its odourless and non-tainting formula, Bio-Dox has been especially designed for preserving hygiene in all areas of the food industry.

These include; nursing homes, hospitals, canteens, kitchens, food plants, manufacturing industries, etc.

By washing hands with Bio-Dox before, during and after handling food, you can be sure that bacterial

contamination is controlled and that food is not tainted by smell or taste.

### *Practical*

Bio-Dox is a thick, clear, yellow, liquid formula, which boasts a controlled foam level.

The soap is designed to lather up in an instant to provide foam for cleaning the hands effectively, but this foam quickly subsides to enable thorough rinsing.

This allows Bio-Dox to cleanse hands with ultimate ease and speed of use.

### *Mild*

Mild for regular everyday use, Bio-Dox contains skin conditioners to cleanse the skin thoroughly without drying.

As a result, Bio-Dox is ideal for use in environments where hands need to be continuously washed with a bactericidal soap to control the spread of bacteria. It is therefore recommended for use in the food hygiene industry and the care sector.

**Suitable for use through dispensing equipment.**

**Bio-Dox is available in 300ml, 1ltr Refill Cartridges and 5ltr Bulk Refill Bottle**

**Bio-Dox is environmentally friendly, as it is fully biodegradable and phosphate free.**
