## SULPHAMIC TOILET CLEANER

***This highly effective toilet and washroom cleaner is Clover Chemicals' best-selling product for good reason...***

### **4-way cleaning action**

STC effectively cleans, descales, deodorises and disinfects in one operation. This ensures that washroom surfaces are left free from scale, scum, and odour-producing bacteria.

### **Pleasant, fresh fragrance**

If a washroom smells pleasant, people know that it has been cleaned. STC leaves a long-lasting, fresh coconut and sweet lemon fragrance, ensuring maximum impact upon those entering the washroom.

### **Thick liquid clings to surfaces**

As a thick liquid, STC clings to surfaces for longer lasting contact, allowing it more time to remove limescale and staining. Even after flushing, a thin film of STC will remain around the toilet bowl, prolonging the contact time for maximum cleaning performance and a longer lasting fragrance.

### **Safe on stainless steel**

Unlike other acidic descalers, STC is safe for use on stainless steel. It is therefore the ideal product for use in all those washrooms where there are stainless steel toilets and urinals.

### **Cleans all washroom surfaces**

As well as being used neat in toilets and urinals, STC can also be diluted and used as a general washroom cleaner. It is then suitable for use on sinks, showers, baths, chrome fixtures and tiled surfaces.
